Economic Activity Index (“GDB-EAI”)

General Commentary - October 2014

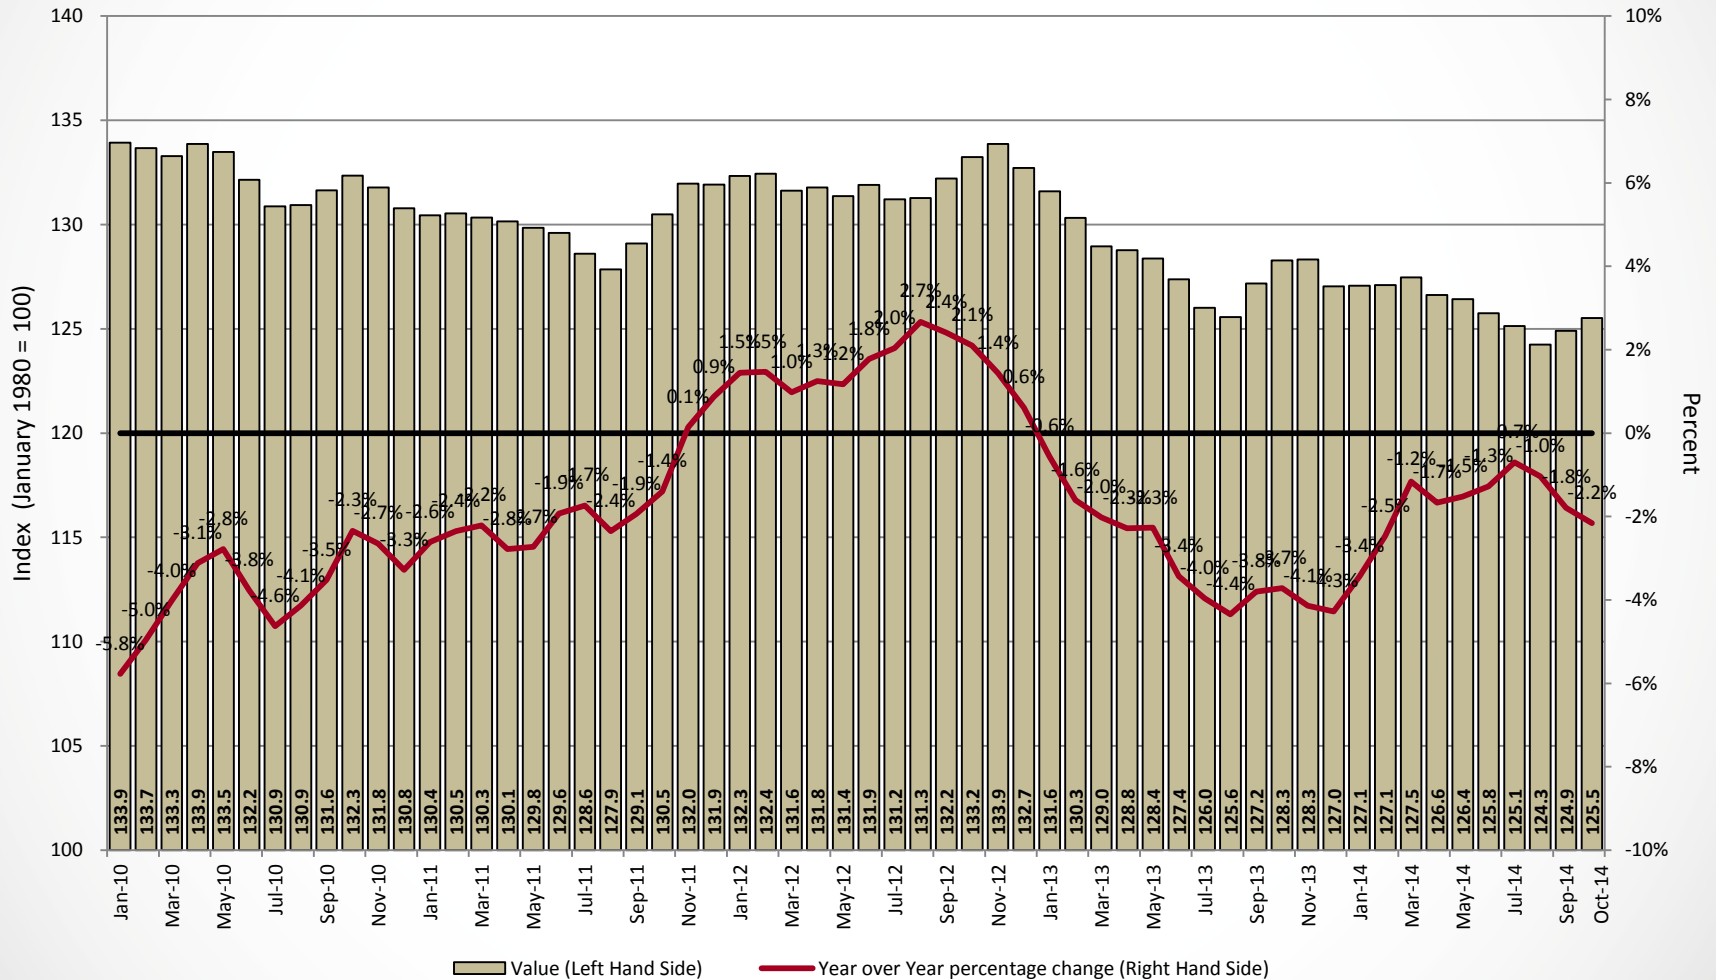

In October 2014, the GDB-EAI registered a month-over-month (m-o-m) increase of 0.5% and a 2.2% year-over-year (y-o-y) reduction

- On a non-seasonal adjusted basis, three of the four GDB-EAI indicators increased month-over-month, including non-farm payroll employment, cement sales, and electric energy generation. The EAI was 125.5 in October 2014, an increase of 0.5% compared to September 2014.
- Total non-farm payroll employment for October 2014 averaged 921,100, an increase of .6% compared to September 2014 and an annual decrease of 0.3%.
- Electric power generation for October 2014 totaled 1,895.9 million kWh, an increase of 5.6% compared to September 2014 and an annual decrease of 1.6%.
- The preliminary number for gasoline consumption* in October 2014 was 79.5 million gallons, 12.1% below October 2013 and 6.6% below September 2014.
- Cement Sales for October 2014 totaled 1.27 million bags, an increase of 14.9% compared to September 2014. Sales declined 10.0% compared to October 2013.

* The monthly gasoline consumption is estimated by the GDB from the Treasury Department's monthly gasoline excise tax collections paid by importers which are transferred to P.R. Highways and Transportation Authority. These collections fluctuate due to changes in inventories and purchases, which do not necessarily reflect the actual monthly consumption reported by retailers.

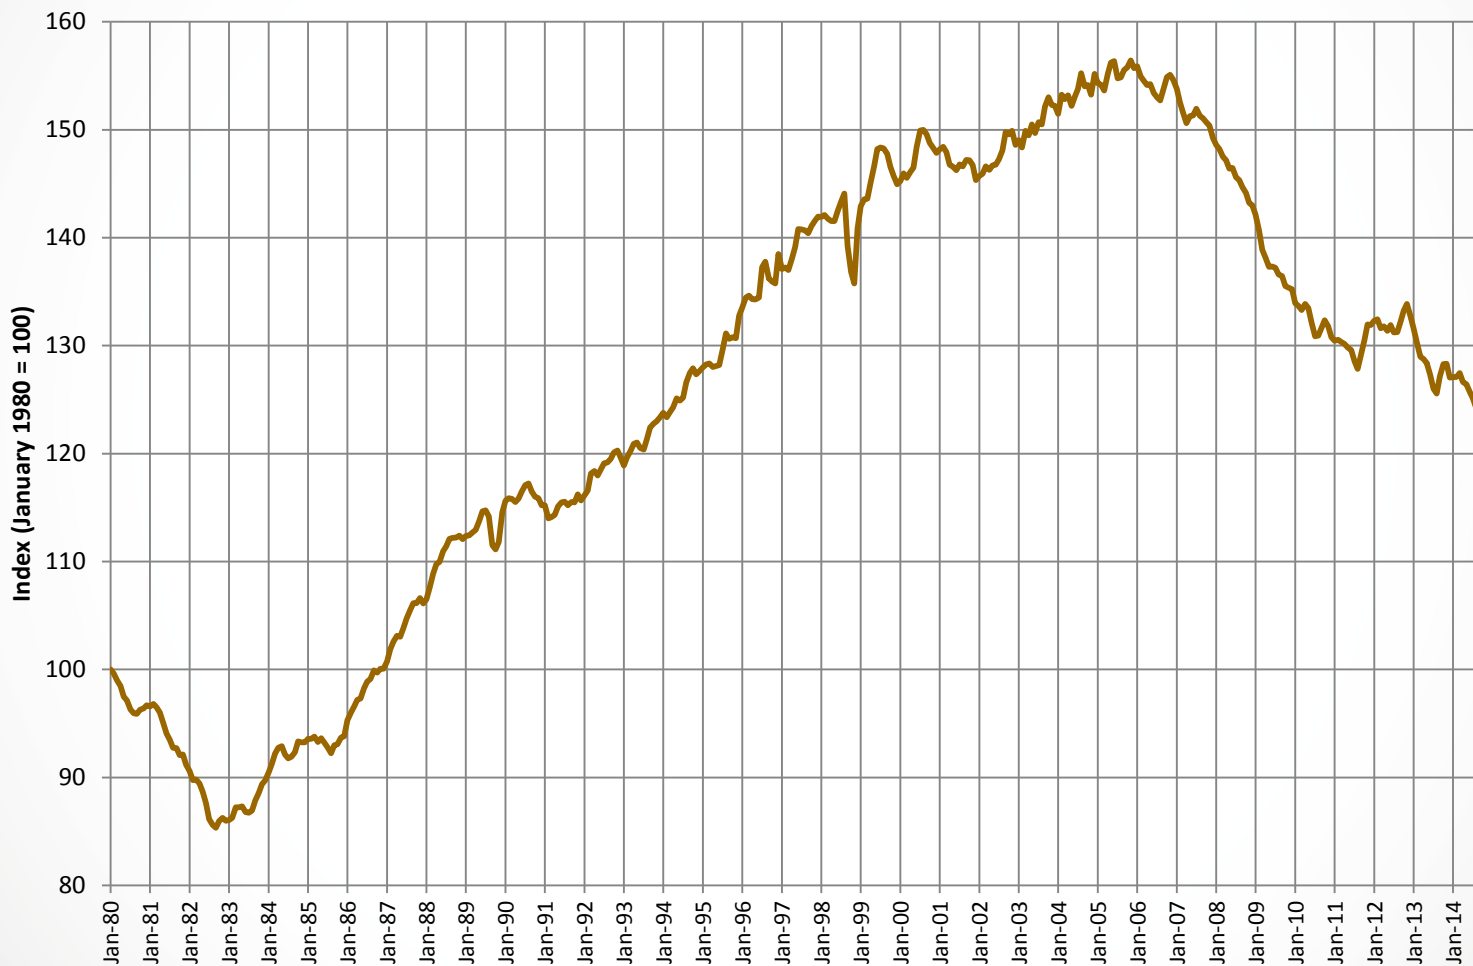

The GDB-EAI registered an increase of 0.5% compared to September 2014 and 2.2% year-over-year reduction in October 2014

GDB Economic Activity Index

The complete series of the new EAI, which starts in January 1980, shows the recessions of FY1982 and FY1983, and the mild recession of FY1991, the recession of 2001. It also shows the path of the Index since the beginning of the current recession.

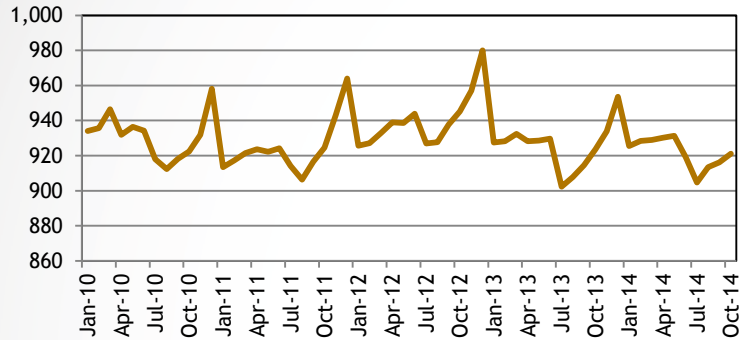

GDB Economic Activity Index

GDB Economic Activity Index Components

Total Non-Farm Payroll Employment*

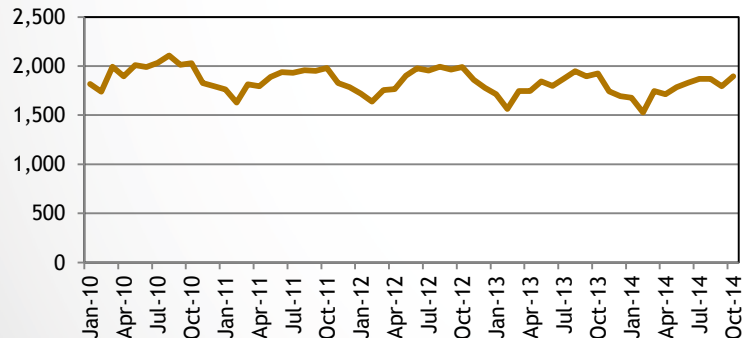

(Thousands of jobs)

- Total non-farm payroll employment for October 2014 averaged 921,100, an increase of .6% compared to September 2014 and an annual decrease of 0.3%.
- Seasonally adjusted private employment has increased for twelve consecutive months, meanwhile public employment is still decreasing.

Electric Power Generation

(Millions of kWh)

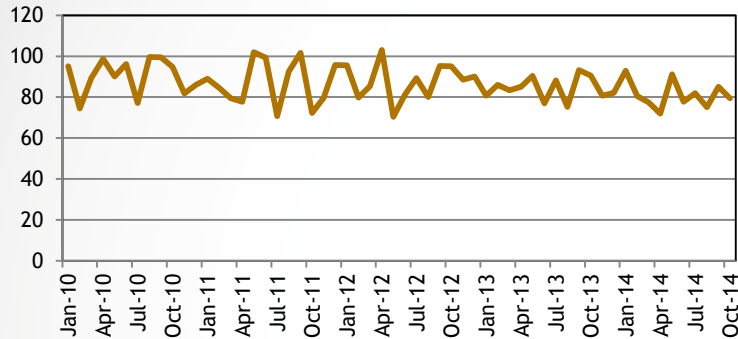

- Electric power generation for October 2014 totaled 1,895.9 million kWh, an increase of 5.6% compared to September 2014 and an annual decrease of 1.6%.

Sources: BLS and PREPA
* Not seasonally adjusted.

GDB Economic Activity Index Components

Gasoline Consumption

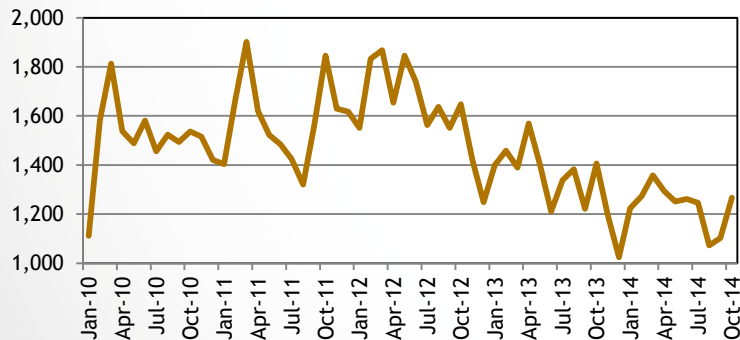

(Millions of gallons)

- The preliminary number for gasoline consumption* in October 2014 was 79.5 million gallons, 12.1% below October 2013 and 6.6% below September 2014.

Cement Sales

(Cement bags sold, in thousands)

- Cement Sales for October 2014 totaled 1.27 million bags, an increase of 14.9% compared to September 2014. Sales declined 10.0% compared to October 2013.

*The monthly gasoline consumption is estimated by the GDB from the Treasury Department's monthly gasoline excise tax collections paid by importers which are transferred to P.R. Highways and Transportation Authority.

Sources: PRHTA and GDB
* Not seasonally adjusted.

Description of the GDB-Economic Activity Index

GDB-EAI Highlights and Composition

GDB Economic Activity Index Highlights

Advantages of the GDB-EAI:

- Readily available
- Highly correlated to Puerto Rico's real GNP
- Reliable tool to monitor actual trend of Puerto Rico economy

The GDB-EAI is made up of 4 indicators:

- Total Payroll Employment (Establishment Survey/ Thousand of employees)
- Total Electric Power Generation (Millions of kWh)
- Cement Sales (Millions of bags)
- Gas Consumption (Millions of gallons)

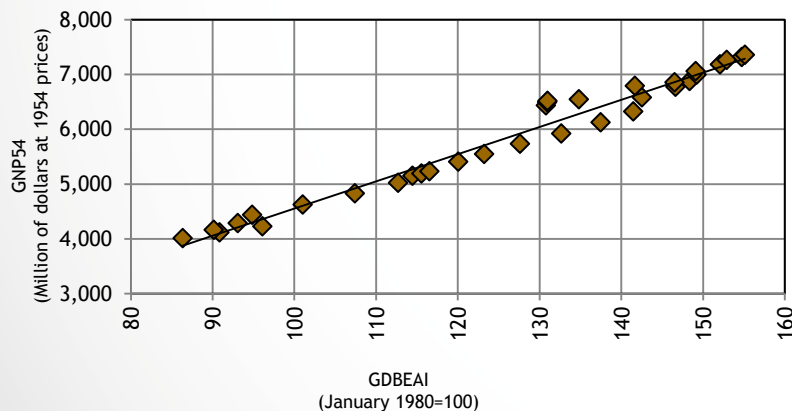

Description of the GDB-EAI

- The GDB-EAI is a coincident index for the economic activity of Puerto Rico. It is highly correlated to Puerto Rico's real GNP not only on the levels, but also on the annual growth rates.
- This index was developed following the methodology similar to that used by The Conference Board in their coincident index. This methodology follows a standard procedure to adjust the data for seasonality and volatility factors.

Real Gross National Product as a function of the GDB Economic Activity Index

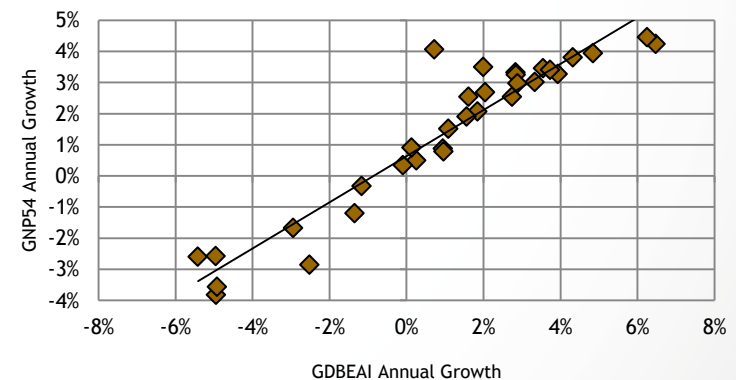

Relationship on the levels: FY1981-FY2013

$$y = 49.65x - 413.16 \quad R^2 = 0.9718$$

Relationship on the growth rates: FY1982-FY2013

$$y = 0.7419x + 0.0064 \quad R^2 = 0.8974$$

Sources: GDB

Appendix

Clarification about the interpretation of the GDB-EAI figures

The GDB-EAI is an indicator of the general economic activity, not a direct measurement of the real GNP. Moreover, the GDB-EAI annual growth rates are not the same as the real GNP growth rates, because the former are more volatile than the latter.

- When it is annualized, the level of the EAI is highly correlated with the **level** of the real GNP (with a Pearson correlation coefficient of 0.9858, for FY1981-FY2013).
- The annual **growth rates** of both variables are also highly correlated (with a Pearson correlation coefficient of 0.9473, for FY1982-FY2013).
- Nevertheless, the annual growth rate of the EAI **IS NOT** the same as the annual growth rate of the real GNP. Being highly correlated does not mean being equal.
- In order to approximate real GNP growth from the EAI annual growth, we estimate a linear regression model relating both variables.
- Plugging in the EAI annual growth rates into the resulting equation we obtain estimates for the annual growth rates of the real GNP.
- This transformation generates an approximation of the actual real GNP growth figures.

Clarification about the interpretation of the GDB-EAI figures (2)

Here is a comparison of the annual growth rates of the GDB-EAI with the actual real GNP figures. There are also estimates of the annual growth of the real GNP using the figures coming from the GDB-EAI.

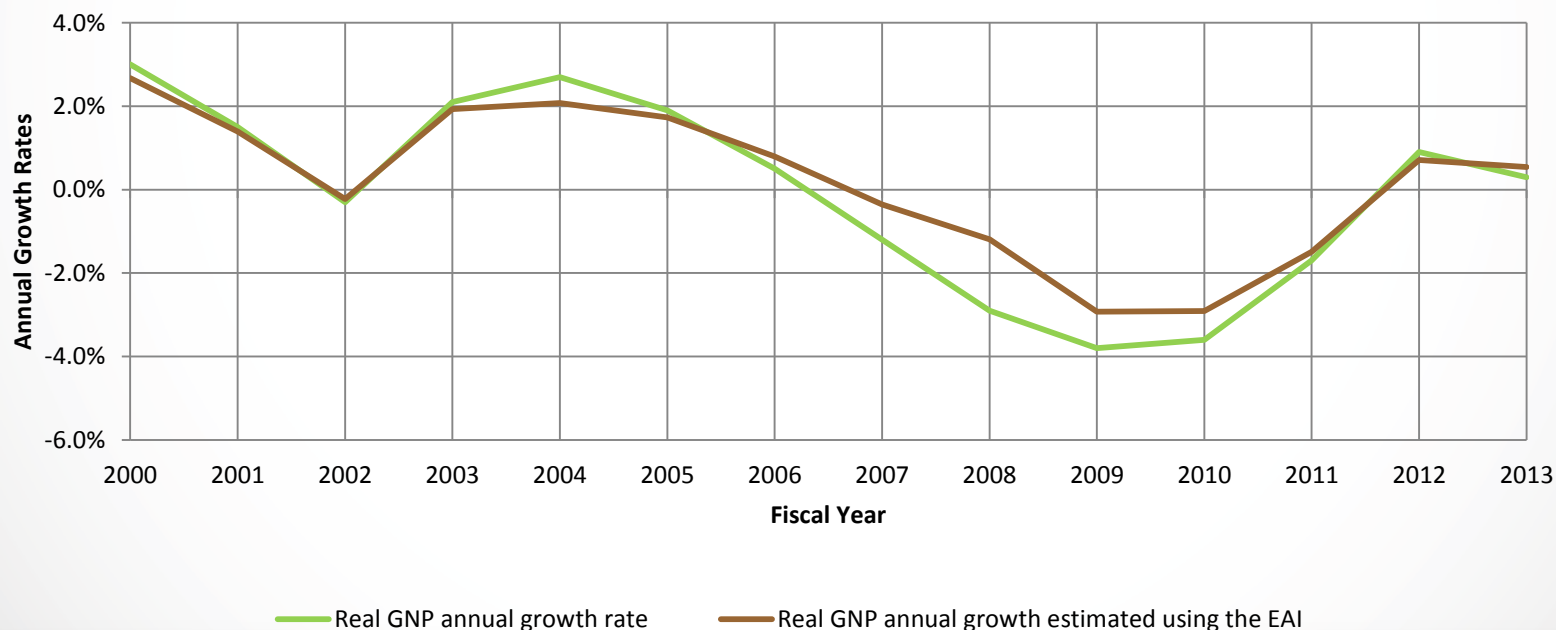

| Fiscal Year | EAI Annual growth | Real GNP annual growth estimated using the EAI | Actual Real GNP annual Growth |
|-------------|-------------------|--|-------------------------------|
| 2000 | 2.9% | 2.8% | 3.0% |
| 2001 | 1.1% | 1.4% | 1.5% |
| 2002 | -1.2% | -0.2% | -0.3% |
| 2003 | 1.8% | 2.0% | 2.1% |
| 2004 | 2.0% | 2.2% | 2.7% |
| 2005 | 1.6% | 1.8% | 1.9% |
| 2006 | 0.3% | 0.8% | 0.5% |
| 2007 | -1.3% | -0.4% | -1.2% |
| 2008 | -2.5% | -1.2% | -2.9% |
| 2009 | -4.9% | -3.0% | -3.8% |
| 2010 | -4.9% | -3.0% | -3.6% |
| 2011 | -2.9% | -1.5% | -1.7% |
| 2012 | 0.1% | 0.7% | 0.9% |
| 2013 | -0.1% | 0.6% | 0.3% |

- Notice that the real GNP growth estimates coming from the EAI are relatively close to the actual real GNP growth figures.

Clarification about the interpretation of the GDB-EAI figures (3)

Here is a comparison graph of the actual real GNP figures and the estimates of the annual growth of the real GNP using the figures coming from the GDB-EAI.
